Assignment Statement-01:

Objective: Install a virtualization tool (VMware or VirtualBox) and create a Virtual Machine (VM) using a pre-configured virtual machine image.

1. **Download the Virtual Machine Image:**
   - Visit thefollowing website
   - https://www.linuxvmimages.com/
   - https://sysprobs.com/download-pre-installed-virtualbox-images-linux-windows
   - https://www.oracle.com/solaris/solaris11/downloads/solaris11-vm-templates-downloads.htmland select a suitable Virtual Machine image (e.g., for Linux distributions like Ubuntu, CentOS,Oracle Solaris, Windows etc.).
   - Download the desired VM image to your local machine.
2. **Install VMware or VirtualBox:**
   - If not already installed, download and install either VMware (VMware Workstation or VMware Player) or Oracle VirtualBox from their official websites:
     - VMware: VMware Downloads
     - VirtualBox: VirtualBox Downloads
   - Follow the installation steps for your chosen tool.
3. **Mount the Virtual Machine Image:**
   - Open VMware or VirtualBox and create a new virtual machine.
   - When prompted to select an OS, choose the option to use an existing virtual machine image (downloaded in step 1).
   - In VMware or VirtualBox, locate and mount the downloaded image file (typically an OVA or VMDK file).
   - Follow the prompts to complete the VM creation using the mounted image.
4. **Start the Virtual Machine:**
   - Once the virtual machine is created with the mounted image, power it on and verify that the operating system loads correctly.
5. **Output:**
   - Provide a screenshot of the **VM configuration settings**, which should include details like:
     - Operating system selected
     - Amount of allocated RAM
     - CPU configuration (number of cores)
     - Virtual storage size
   - Example:

Note:

1. **At the start of the PDF student must enter his /her name, Roll Number**
2. **Each student is strictly required to select the virtual machine image corresponding to their roll number as listed in the table below —no swaps!**
3. **You must record your entire screen while starting VMware or VirtualBox and then launching the assigned operating system inside it. Provide the YouTube or Google Drive link of your recorded screen video. This is an important step for the evaluation of your assignment.**

Roll No.	Operating System Name	Versions / Variants
1	Fedora	39, 36, 35, 34
2	Kubuntu	22.04 LTS, 21.10, 21.04, 20.04 LTS
3	MX Linux	21, 20.2, 20.1 KDE, 19.3, 19
4	Ubuntu	24.04 LTS, 23.10, 22.04 LTS, 20.04 LTS
5	Kali Linux	2024.3, 2023.4, 2022.1
6	Rocky Linux	9.4, 9.0, 8.10
7	Debian	12 (12.0.0), 11 (11.1.0), 10 (10.11.0), 9 (9.13.0)
8	Ubuntu Server	24.04 LTS, 22.04 LTS
9	Elementary OS	6, 5.1
10	Manjaro	22.0, 21.0, 20.2
11	CentOS	8 (8.4.2105), 7 (7.9.2009), 6 (6.10)
12	AlmaLinux	9.0, 8.6
13	Linux Mint	21, 20 (20.3), 19.3
14	Ubuntu MATE	22.04 LTS, 21.10, 20.04 LTS, 18.04 LTS
15	Pop!_OS	22.04 LTS, 21.10, 20.04

Roll No.	Operating System Name	Versions / Variants
16	Slackware	15.0
17	PCLinuxOS	2020.10
18	Windows Server	2016
19	Deepin	20.3, 20.1, 15.11
20	Ubuntu Budgie	22.04 LTS, 21.10
21	Xubuntu	22.04 LTS, 21.10, 20.04 LTS
22	Q4OS	3.13
23	Arch Linux	2022, 2021.01.01
24	Garuda Linux	2203, 2012
25	Lubuntu	23.04, 22.04 LTS, 20.04 LTS, 18.04 LTS
26	Linux Lite	5.8, 5.4
27	Zorin OS	16 Core, 15.3 Core
28	CentOS Stream	9, 8
29	PureOS	10, 9.0
30	Windows Server	2019
31	EndeavourOS	Atlantis Neo 21.5, 2021.02.03
32	Linux Mint Debian Edition (LMDE)	5, 4
33	AntiX	21, 19
34	Ubuntu Studio	22.04 LTS, 21.10, 20.04 LTS
35	Mageia	8, 7.1
36	Ubuntu Kylin	22.04 LTS, 20.10, 20.04 LTS
37	KaOS	2021.01
38	Peppermint OS	10
39	Solaris	11.4
40	Windows	98 SE
41	Feren OS	2021.01
42	Artix Linux	2024
43	GeckoLinux	152.210223
44	XeroLinux	(no version specified)
45	Parrot OS	Security 4.10
46	KDE Neon	20200326-1117
47	Android x86	9.0-r2
48	Garuda Linux	2203, 2012
49	Ubuntu Studio	22.04 LTS, 21.10, 20.04 LTS
50	Deepin	20.3, 20.1, 15.11

Roll No.	Operating System Name	Versions / Variants
51	Linux Lite	5.4
52	Zorin OS	15.3 Core
53	CentOS Stream	8
54	Fedora	35, 34
55	Kubuntu	21.04, 20.04 LTS
56	MX Linux	20.1 KDE, 19.3, 19
57	Ubuntu	23.10, 22.04 LTS, 20.04 LTS
58	Kali Linux	2023.4, 2022.1
59	Rocky Linux	8.10
60	Debian	10 (10.11.0), 9 (9.13.0)
61	Ubuntu Server	22.04 LTS
62	Elementary OS	5.1

Submission Requirements for the Assignment:

1. **Virtual Machine Configuration Screenshot:**
   A clear screenshot showing the VM configuration details (VMware or VirtualBox), including allocated RAM, CPU cores, and disk space.
2. **Operating System Selection:**
   Specify the VM image you selected based on your roll number, including the OS name and version.
3. **Screen Recording Link with voice over:**
   A link to your full screen recording of the entire process — starting VMware/VirtualBox and launching the OS inside it. The link can be hosted on YouTube or Google Drive.
4. **Installation or Setup Steps:**
   A brief written description of the steps you followed to mount and start the virtual machine image.
5. **System Performance Observations:**
   Notes on the VM's performance (e.g., speed, responsiveness), and any issues encountered during setup or operation.
6. **Network and Internet Configuration (Optional):**
   Details on how you configured networking for the VM, and if the OS had internet access.
7. **Additional Software or Tools Installed (Optional):**
   List any extra software you installed inside the VM after launching the OS.
8. **Conclusion / Learnings:**
   A short paragraph summarizing what you learned from this exercise and how it might be useful for future projects.
